

Site Clearance for J Browne Construction Co Ltd

Clearance to facilitate redevelopment of land for Thames Water

Travellers had previously broken into the site, occupied it and used it as an illegal waste transfer station leaving a multitude of different waste types for us to capably and sustainably dispose of once evicted from the site.

Over 1200 tonnes of wastes were removed from the 8-acre site in Lea Bridge Road, Hackney then sorted for recycling at our Materials Recycling Facility.

Full resources and expertise deployed

The McGrath Group used its expertise in managing mixed waste streams including potentially hazardous material by undertaking thorough checks and cleansing any contaminants found on the site in preparation of the clearance.

Equipment used included a 360-degree excavator, used to sort mostly building wastes into separate material streams before being loaded onto Rolonoff vehicles for transportation to our MRF in Barking.

The McGrath Group provides site clearance services to assist site owners to comply with all current legislations ensuring that their sites remain safe and clean.

We own a comprehensive range of waste handling equipment and understand the tight deadlines due to the nature of these projects.

Our specialist teams directly employed respond to the client's needs and the latest developments occurring on the site.

State of the art facilities

Our facilities use the very latest in sorting operating technology to process waste into individual material streams ready for re-processing into raw materials for manufacture into new products. Materials that cannot effectively be segregated for recycling are diverted from landfill and processed into a material suitable for fuel generation.

Electronic waste transfer consignment notes are issued for all materials we manage in compliance with the client's Duty of Care obligations. Our digital data capture systems enable us to provide complete chain-of-custody reporting from collection to final destination.

Site clear for redevelopment

With the site now clear and ready for redevelopment; construction could begin on a new two storey primary school building including a nursery and a new three storey secondary school building, together with associated external play areas, sports grounds, ball courts, multi-use games areas, vehicle access, parking, pick-up, drop-off areas, cycle parking and landscaping.

Client:
J Browne Construction Co Ltd

Contract:
MRF Facilities and Recycling Services

Duration:
10 Days

Start Date:
April 2018

Recycling/Recovery rates:
100% of the waste was diverted from landfill

I couldn't fault McGrath for the way they carried out this site clearance for us and wouldn't hesitate to use them again. Their staff were extremely knowledgeable in managing all of the different types of waste and worked efficiently to clear the waste, whilst keeping us informed with daily updates. The service we received was excellent from providing the initial quote to leaving the site in a pristine condition.
